FRINDEL OPTICS

ODMEPON device 100G

Overview

Merely plug in the transceivers, connect the fibers and the link is up and running. The CUBOmini 100G ODD is a new and much simpler approach to 100G optical services. This approach not only makes the setup simple "plug & play" but also enables full. Dense Wavelength Division Multiplexing (DWDM) at 100G is no longer a premium long-haul technology—it's a mainstream foundation for metro, regional, and even data center interconnect (DCI) deployments. Its ability to multiply fiber capacity, reduce per-bit cost, and support coherent modulation makes. 100G coherent DWDM technology enables the transport of 100G capacity over a single wavelength across long distances.
