FRINDEL OPTICS

Where is the detection port of the fiber optic sensor

Overview

Extrinsic fiber-optic sensors use an optical fiber cable, normally a multimode one, to transmit modulated light from either a non-fiber optical sensor, or an electronic sensor connected to an optical transmitter. An example is the measurement of temperature inside aircraft jet engines by using a fiber to trans.

Where is the detection port of the fiber optic sensor

FU-96 Fiber-optic sensor for liquid level detection

Introduction to Fiber Optic Sensing

Fiber optic sensing is not constrained by line of sight or remote power access and, depending on system configuration, can be deployed in continuous lengths exceeding 45 km (30 miles) with detection at
