

A box spectrometer

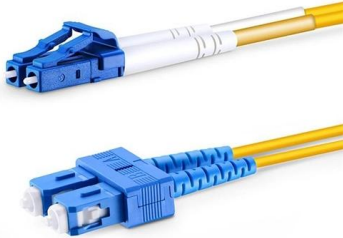

Overview

The device described in this article is a low-cost solution to create a portable version of a spectrometer with which it's possible to do a new level of analysis useful from the DIY to work application as well as for the educational environment. Before getting to the heart of the project it is appropriate to explain what spectrometry is. Specifically it has AS72651 (labeled U1), AS72652 (U2), AS72653 (U3), a Flash Eprom AT25SF041 (U4) by Atmel with 4Megabit of memory, and dual I/O that mount the Mo. Now we will explain how to assemble this project with an understanding that the breakout board has to be self-made and has to be connected to an Arduino Uno board using the wiring drawing.
