Ethernet Splitters 101: Everything You Need to Know

Ethernet splitters explained: how they work, when to use them, and why switches are better for high-speed networks. Learn the facts before you buy.

Fiber Optic Splitters

Fiber optic splitters enable a signal on an optical fiber to be distributed among two or more fibers. Since splitters contain no electronics nor require power, they are an integral component and widely used in

Can You Split a Fiber Line?

Splitting a fiber line allows network providers to maximize the use of a single fiber optic cable, reducing the need for laying multiple lines. This leads to

Fiber-optic splitter

It is an optical fiber tandem device with many input and output terminals, especially applicable to a passive optical network (EPON, GPON, BPON, FTTX, FTTH etc.) to connect the main distribution

White Paper: FTTH architecture overview

The 1x32 splitter is directly connected via a single fiber to an GPON optical line terminal (OLT) in the central office. On the other side of the splitter, 32 fibers are routed through distribution panels, splice

Introduction to Passive Optical Network Splitter Architectures

A fiber broadband provider typically determines and overall split ratio for the network, such as 1x32 or 1x64, and uses combinations of splitters to meet that ratio with each PON port.
