

Alloy Photoelectric Spectrometer

Alloy Photoelectric Spectrometer

X-Ray Photoelectron Spectroscopy (XPS): Principles and Application

10.1 Introduction X-ray photoelectron spectroscopy (XPS) is a powerful technique largely applied to materials such as minerals, heterogeneous catalysts, metals and oxides, polymers and biopolymers,

[Contact Us](#)

X-Ray Photoelectron Spectroscopy , Materials Research

X-ray Photoelectron Spectroscopy (XPS) is a technique based on the Photoelectric Effect. When a material is irradiated with x-rays, photoelectrons are subsequently

[Contact Us](#)

Absolute work function measurement by using photoelectron spectroscopy

In that sense, an electrically insulating sample is difficult to measure its WF by electron spectroscopy. Nonetheless, the photoelectron spectroscopy is an important and practical method

[Contact Us](#)

Photoemission spectroscopy

Photoemission spectroscopy (PES), also known as photoelectron spectroscopy, refers to energy or spin measurement of electrons emitted from solids, gases or liquids by the photoelectric effect, in

Photoelectron Spectrometer (ESCA)

To prevent the material surface from becoming contaminated and to prevent interference with the electron emission from the specimen, the photoelectron

[Contact Us](#)

Auger

Based on typical application examples in materials science, a concise approach to all aspects of quantitative analysis of surfaces and thin films with AES and XPS is

[Contact Us](#)

Photoelectric Direct Reading Spectrometer in the Real World

The photoelectric direct reading spectrometer is transforming how industries analyze materials and substances. Unlike traditional spectrometers that require complex setups and

[Contact Us](#)

X-Ray Photoelectron Spectroscopy (ESCA: XPS/ISS)

The photoelectron spectroscopy for chemical analysis (ESCA, also known as photoelectron spectroscopy XPS) uses the photoelectric effect for information on the chemical

[Contact Us](#)

X-Ray Photoelectron Spectroscopy (XPS; aka Electron

X-ray photoelectron spectroscopy (XPS) is a surface sensitive, non-destructive technique used routinely to analyze the outermost ~10 nm (~30

[Contact Us](#)

X-ray photoelectron spectroscopy (XPS)

We perform our XPS measurements on a PHI Quanterra II (Physical Electronics). The device works with monochromatic Al-K α radiation and is equipped with an argon

[Contact Us](#)

Ultraviolet photoelectron spectroscopy: Practical aspects and best

Ultraviolet photoelectron spectroscopy (UPS) is an important technique for measuring the energies of the valence states of metallic, semiconducting and adsorbate-covered metal and

[Contact Us](#)

Q2 ION - Spark Tech Instruments

The new generation of spark spectrometers, Q2 ION, takes metal analysis to new heights of simplicity and ease of use. Currently, it is one of the smallest and lightest ultra-compact spark emission

[Contact Us](#)

Angle-resolved photoemission spectroscopy

Angle-resolved photoemission spectroscopy (ARPES) is an experimental technique based on the photoelectric effect . It is the most powerful tool for probing the electronic structure of solids.

Portable Metal Analyzer

The SPECTROPORT portable arc spark spectrometer is ideal for many applications in the metal producing, processing, and recycling industries. Find out more.

[Contact Us](#)

Photoelectron Spectroscopy

Photoelectron spectroscopy is based on the photoelectric effect that directly probes (occupied) electronic states, that is, valence bands or Fermi surfaces, and a (chemical) shift in the core-level energy that

[Contact Us](#)

Photoelectron Spectroscopy

Photoelectron spectroscopy is a molecular spectroscopic method which is based on photoionization. If an atom or molecule (M) is irradiated with photons of larger energy than the ionization energy of the

Assessing metal powder quality for additive manufacturing using

In this study, we purposely oxidized and fractionated titanium-based and nickel-based alloy powders to evaluate the usefulness of diffuse light spectroscopy in detecting powder condition

[Contact Us](#)

2. Imported design is convenient for expansion.

The design of two inlets saves space and allows for rear line entry.

The Development of a Shield of Amorphous Soft Magnetic Alloy

The results of calculations of the efficiency of the shielding of a photoelectronic spectrometer by amorphous alloys, designed to protect the instrument from the Earth's magnetic field, are presented.
