

Bending-insensitive fiber OS2

Overview

The bend insensitive fiber patch cable has less attenuation when bent or twisted compared with traditional fiber patch cable and this will make the installation and maintenance more efficient. Fully certified to meet strict international safety and quality standards for the industry. This OS2 fiber patch cable is ideal for 1/10/25/40/100/400G Ethernet connections. How to choose, deploy, and scale fiber optic pigtailed in a world of FTTR, 800G/1. When stressed by bending, light in the outer part of the core is no longer guided in the core of the fiber so some is lost, coupled from the core into the cladding, creating a higher loss in the stressed section of the fiber.
