

# **Cable tray laying machine with variable frequency speed control**

## Overview

---

The equipment adopts a servo drive system and PLC control, which can accurately adjust the roller spacing and forming speed to ensure that the U-shaped/C-shaped trough, reinforcement ribs and other structures are formed in one time, with high efficiency and high dimensional. HCM-600 Cable Tray Automatic Production Line is a cable tray roll forming line that adopts metal sheet coils as raw material. It forms the sheet into specific shapes and specifications through decoiling, leveling, punching, notching, and roll forming. A cable tray system used to support insulated electrical cables used for power distribution control and communication as an alternative to open wiring or electrical conduit systems.
