**Cables are placed on the  
external frame of the  
distribution box**

## Overview

---

A distribution frame is a physical part of the network that acts as a passive cable termination. This is where cables are punched down and it consists of patch panels and punch-down blocks. He's deeply familiar with electrical standards and application needs in Europe and North America. In modern electrical systems, cable distribution boxes (also known as electrical distribution boxes or distribution boxes) play a crucial role as the key hub for managing, distributing, and protecting circuits.
