

Calculation of Optical Cable Transmission Distance

Overview

The distance in fiber optics is calculated using the following formula: [text {Distance (km)} = frac {text {Speed of Light in Fiber (km/s)} times text {Round-Trip Time (s)}} {2}] Where: Speed of Light in Fiber $\approx 200,000$ km/s (depends on the refractive index of the fiber). There are a number of ways to tackle the problem of determining the power requirements for a particular fiber optic link. For some reason, some substance in the fiber blocks the transmission of the light signal inside the fiber.

Calculation of Optical Cable Transmission Distance

Calculating Fiber Optic Loss Budget

Calculating a "Loss Budget" transmission system would be used. Two operation centers are located about miles apart based on map distance. Assume that the primary communication devices at each
