

Can Huawei routers with fiber optic interfaces be used

Overview

An optical fiber is a carrier of optical signals and transmits optical signals over a short distance. It is highly likely the ISP will not let you replace the router or you must buy it from them. Generally fiber optic connections use either plain fiber-Ethernet or more commonly GPON (which still carries Ethernet data), and Ethernet-to-Ethernet passthrough is usually called bridge mode. I bought a new TP-Link AEX-7500 router from HK, I am trying to replace TP-Link AEX-7500 with Huawei LG8245x6 and connect the TP-Link. In addition, Huawei's QuickODN solution revolutionizes optical infrastructure network construction.
