

Can a fiber optic splitter be used for multiplexing optical cables

Overview

Optical fiber splitters can distribute optical signals to multiple target locations, achieving multiplexing of optical signals, saving the amount of optical fibers and cabling costs. Unlike active devices (which require power), splitters operate without electricity, relying solely on the physics of. It is a crucial component in Passive Optical Networks (PON) and Fiber to the Home (FTTH) deployments.

Can a fiber optic splitter be used for multiplexing optical cables

What Is an Optical Splitter?

What's an optical splitter? How does the fiber optic splitter work? How many fiber splitter types? How to choose the right fiber splitter? Find the answers
