

Co-packaged optical value

Overview

Co-Packaged Optics (CPO) is an advanced optical interconnect architecture that integrates optical components—such as photonic integrated circuits (PICs) and lasers—directly alongside switching ASICs or processors within the same package. Traditional pluggable optical modules are increasingly constrained by signal loss, power consumption, and latency because they require long electrical traces between the switch ASIC and the optical engine. 4 T and Above), Component (Optical Engine, Electrical IC, Laser Source, and More), Integration Approach (On-Board Optics, and Co-Packaged Optics), End-Use Application (Hyperscale Cloud Data Centers. The global co-packaged optics market report 2026-2036 from Future Markets Inc provides authoritative analysis of the transition from pluggable optical transceivers to co-packaged optics within AI data centre switch architectures. Market revenue growth is driven by factors such as the exponential increase in data center traffic, rising demand for high-performance.

Co-packaged optical value

Co-Packaged Optics Market Report 2025-2030

The Co-Packaged Optics Market grew from USD 2.15 billion in 2024 to USD 2.43 billion in 2025. It is expected to continue growing at a CAGR of
