

Danger Points in Fiber Optic Cable Laying

Overview

Besides the usual safety issues for all construction, generally covered under OSHA rules in the US (OSHA 10 and 30), fiber optics adds concerns for eye safety, chemicals, sparks from fusion splicing, disposal of fiber shards and more, covered in Part 1. Fiber optic cables, with their delicate nature and light-carrying capabilities, require stringent safety protocols. Without proper care, handling optical fibers can result in physical injuries from shards, or optical damage from laser light exposure. As electrical professionals, most of us take fiber optic (FO) safety for granted. Know the standards that apply to your work. Whether you're installing new fiber optic cables or troubleshooting and repairing an existing fiber network, a working knowledge of the regulations that apply to your. Glass strands can splinter, lasers can damage eyes, and improper handling can compromise.

Danger Points in Fiber Optic Cable Laying

The FOA Reference For Fiber Optics

Careful handling is more appropriate. Always wear safety glasses with side shields. Treat fiber optic splinters the same as you would treat glass splinters. Never look
