

Distribution box rf

Overview

RF Distribution System is a highly integrated RF signal distribution device (splitter/combiner) typically used to distribute test signals through multiple channels to perform various tests. The 8 x 1:1 redundant RF-over-Fiber system of the FiberLink CompactLine Series is housed in a compact 19" / 1RU chassis and enables the flexible, high-quality and secure optical transmission of up to eight 1:1 redundant RF signals (L-Band, Extended L-Band and Broadband up to 3. Our flexible distribution boxes enable reliable, decentralised signal transmission and power transmission up to protection class IP67 – wherever passive distribution boxes are required. Reliable, stable, and precise frequency conversion with upconverter and downconverter modules. Our extensive portfolio of RF HPAs includes travelling wave tube amplifiers (TWTAs), solid-state power amplifiers (SSPAs), redundant system controllers, and sub-systems. Amplifiers can also be incorporated to minimize path loss and manage signal power from input.

Distribution box rf

6502B Datum (RF Distribution Module) , ArtisanTG(TM)

The Datum 6502B Distribution Module is a ten channel, RF distribution amplifier packaged in a 1U rack mount chassis. It is comprised of ten, low phase noise RF
