

Do homes need a distribution box

Overview

Residential: In homes, distribution boxes are typically smaller and handle standard circuits for lighting, outlets, and basic appliances. They don't need to manage heavy loads but still play a vital role in preventing electrical faults that could lead to fires. Hidden behind walls or tucked away in utility closets lies a quiet hero of modern homes: the house distribution box. Also known as a consumer unit or fuse box, this unassuming metal cabinet is the nerve center of your home's electrical system.
