

Do the optical modules need to be swapped on both sides

Overview

Specifically speaking, the wavelength of optical transceivers need to be matched on each end. Non-Huawei-certified optical modules cannot ensure transmission reliability and may affect service stability. Everything was fine at 10gigs if the switch and nic were using original intel modules or the switch. A key advantage of SFP+ Modules is that they are "hot-swappable", meaning they can be swapped out while the router is still powered on.

Do the optical modules need to be swapped on both sides

The Basics of Coherent Transmission

The tunable laser is also a core component of all these optical communication systems, both IM-DD and coherent. The laser generates the optical signal encoded and sent over the optical fiber. Thus, the
