Does the digital optical on the receiver from the TV give you

It does not usually give you the full signal. Most TVs strip a 5.1 or 7.1 LPCM (uncompressed) audio signal down to 2.0, which is the max amount of uncompressed channels supported by optical cables.

Users of Optical Modules

Many different forms of optical modulation and multiplexing have been employed in optical modules. The most common modulation technique historically has been on-off keying or NRZ. Pulse-amplitude modulation (PAM-4) has

also been extensively used. In the 2010s, coherent optical modulation has been used. Techniques include Dual Polarization Quadrature Phase Shift Keying (DP-QPSK) and QAM-16.
