

# **Does the steel wire in an optical fiber cable need to be grounded**

## Overview

---

Many fiber optic cables include metallic components — such as steel armoring, aluminum moisture barriers, copper strength members, or metallic messenger wires — that absolutely must be grounded to prevent electric shock, equipment damage, and fire hazards. While nonarmored fiber optic cables don't require grounding due to their nonconductive properties, grounding is crucial when using armored fiber optic cables. OK - A nearby lightning ground strike can cause enough of a voltage difference that a high. Any cable that includes any conductive metal must be properly grounded and bonded in conformance with the comprehensive references to the National Electrical Code (NEC), ANSI and IEEE and NFPA Standards for safety.

## Does the steel wire in an optical fiber cable need to be grounded
