PHY 300 Lab 6 Fall 2009 Lab 6: Michelson Interferometer 1

The Michelson interferometer (see Fig. 1) is based on the use of some sort of beam splitter. This can either be a partially silvered mirror, or a cube beamsplitter (where a thin layer of a different refractive

optics

In this type of experiment we can't distinguish between the contribution from the input phase and the contribution from the beam-splitter.

Physics: Beam splitter

A beam splitter or beamsplitter is an optical device that splits a beam of light into a transmitted and a reflected beam. It is a crucial part of many optical experimental and measurement
