FPGA directly connected to optical module

Design and Implementation of an FPGA-Based 10G Optical Fiber

To address the sharp increase in real-time data exchange volumes between nodes in real-time distributed systems, this paper designs and implements a 10G optical fiber interface

The Application of FPGA in Optical Fiber Sensing and Communication

Abstract To obtain pulsed light signal used as pulsed pump light for optical fiber sensing and communication systems, a design scheme of generating pulsed light based on continuous laser and

Design Approach for a FPGA based Ethernet Bridge for Optical Fiber

Keywords--FPGA, RTL Design, Optical Sensing Circuit, Ethernet; I. INTRODUCTION In telecommunications, fiber optics is one of the major building blocks due to its high bandwidth

You need a clocking system that works well with high-speed optical transceivers. In most cases, this would involve PLL (Phase-Locked Loop) or MMCM (Mixed-Mode Clock Manager) components in the

FPGA Controlled Integrated Optical Cross-Connect Module

Abstract We present an FPGA controlled 4x4 integrated WDM optical cross-connect followed by wavelength converters as optical module for building a large port optical packet switch.
