

Features of CFP optical modules

Overview

A CFP module is a pluggable optical transceiver engineered for high-speed networking applications such as Ethernet, OTN (Optical Transport Network), and SONET/SDH. Form factor: Larger than SFP or QSFP, optimized for high power and long-haul optics. The term "C form-factor pluggable" refers to the specific form factor and electrical interface of these modules, ensuring. Defined by the CFP Multi-Source Agreement (CFP MSA) and standardized under IEEE 802.

Features of CFP optical modules

CFP vs CFP2 vs CFP4 vs CFP8 Optical Transceivers:

Explore the differences between CFP, CFP2, CFP4, and CFP8 optical transceivers, including size, power usage, bandwidth, and DSP integration.
