

Fiber Optic Communication UV Adhesive

Overview

UV-curable adhesives are used to bond optical fibers to other components, and UV-curable resins can be used to terminate optical fibers into connectors or ferrules. To secure fibre-optic cables, fibre arrays and waveguides, Hoenle has developed special adhesives that can allow an unimpeded transmission of light at optical interfaces. To maintain their light transmission properties, they do not yellow or otherwise change in colour with age. The Dymax OP-4-20655 Adhesive for Fiber Optic Assembly is a clear, low-shrinkage, UV/visible light-c.

Fiber Optic Communication UV Adhesive

Adhesive Applications in Fibre Optics

To allow fast curing after adjustment of the fibreglass cables, these adhesives are usually UV-curing, allowing small bonding surfaces to be set and cured within seconds. Specially formulated Hoenle
