

Fiber optic cable installation requires qualifications

Overview

The Certified Network Cable Installer (CNCI ®) has become the industry preferred certification for fibre optic cable installation and is specified as a requirement on many job profiles and installation project contracts. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. Depending on the installation method, this may involve trenching or aerial construction. The Fiber Broadband Association offers four types of professional certifications outlined below. The FBA OptIC Path™ course consists of 144 hours of instructor-led and hands-on practices to equip future fiber technicians with the skills and knowledge required to install, splice, test and maintain. Undertake fibre optic cabling installation, termination and testing to the highest quality whilst complying to industry best practice and standards to ensure a right first-time approach.
