

Fiber optic temperature measurement cable in Democratic Republic of Congo

Overview

The project includes constructing a state-of-the-art National Data Centre in Brazzaville and laying 600 kilometers of fibre optic cable to interconnect with Cameroon and the Central African Republic. The 5 countries covered by the project are located in Central and Southern Africa and includes: the Democratic Republic of Congo. However, we must recalibrate our device to produce reliable and accurate measurements with a different sensor. It is meaningful that this backbone network promotes competition between telecommunication. Funded by the African Development Bank (AfDB), the initiative boosts the country's ambition to become a digital hub in Central Africa.
