

Flame-retardant PE optical cable

Overview

Certified to B2ca CPR and FE180 fire-resistance standards, these cables maintain optical integrity under extreme heat and flame exposure—ideal for tunnels, hospitals, airports, industrial plants, data centers, and railway networks. Corning Optical Communications manufactures quality flame retardant optical fiber cables for indoor applications, which comply with the requirements of the National Electric Code® (NEC® 2023) published by the National Fire Protection Agency (NFPA). These composite cables are specifically designed for radiation sensors and to withstand harsh environments encountered in nuclear power plants. ETK Kablo 's fire-resistant fiber optic cables ensure continuous data transmission during fire conditions, safeguarding critical communication lines when reliability is most crucial. Flame retardant PE (polyethylene) is a material whose flame retardant properties are improved by adding flame retardants.

Flame-retardant PE optical cable
