

Gcy type optical cable

Overview

The GCY-288C air blown microduct cable features internal fiber units composed of multiple 250µm bare optical fibers housed in loose tubes made of high modulus material filled with waterproof compound. These units are supported and protected by a central filler rope, which is stranded around a. Both initial and periodic qualification testing are performed to assure the cable's performance and durability. Parameter (nd t it from water ingress. There are different types of fiber optic cables because each type is optimized for specific applications that have unique requirements for bandwidth, transmission distance, and environmental factors. 12 Cores Single Mode Fiber Optic Cable GCYXTY Product Description: The optical cable adopts the silica series single-mode optical fiber suggested by ITU-TG. All fibers in the fiber optic cable used in the project are of the same type and source (same factory, same material, same manufacturing).
