

Green Trough-type Cable Trays

Overview

Green Trough is an environmentally friendly cable trough made primarily from waste plastic. Above-ground laying of cables shortens the construction period and improves workability. 7,000 tonnes of recycled household plastic waste is used to make Green Trough in one year. Simple and fast to install thanks to its low weight and intuitive joining mechanism and can be modified on-site using basic hand tools. TTS Green Trough cable trough is suitable for a wide range of civil infrastructure projects including rail, motorways, bridges, tunnels, water treatment plants, nuclear power and renewable energy - the cable troughing is made from a 100% recycled polymer.
