

How much does it cost to contract fiber optic cable per kilometer

Overview

A practical frame is \$40,000–\$350,000 per km, with a common mid-range around \$120,000–\$180,000 per km for standard single-mode fibre in ducted runs. Per-unit considerations include \$/km for total project, \$/duct meter for ducting work, and \$/splice for termination. Commercial building installations with 100-200 network drops generally range from \$15,000 to \$30,000. The cost of fiber optic cable per kilometer can vary significantly based on a variety of factors, including the type of fiber optic cable, the geographical region, the installation environment, and the specific requirements of the project. In straightforward urban corridors with existing ducts or minimal permitting hurdles, total per-km costs often land near the low end. Buyers typically pay a wide range for laying fibre, driven by terrain, routing, and installation method.
