Configure mirroring with a switch SPAN port

This article describes how to configure a SPAN port for traffic mirroring when monitoring OT networks with Microsoft Defender for IoT.

[Contact Us](#)

SPAN Session or Port Mirroring

The SPAN sessions send a copy (mirror) of the traffic to another interface or VLAN on the switch that has been connected to a network analyzer or monitoring device.

Mirror Port on Core Switch not seeing other traffic from edge switches

We have created a Mirror (Span) port on our Core switch in order to see all traffic on the network, however, we are actually only seeing very little traffic. I would say only about 10-15 percent

Port Mirroring

Port mirroring causes the switch to make a copy of a traffic flow and send the copy to a device for analysis. Use port mirroring in diagnostic sniffing--use the mirror to view the packets in the flow

Use RSPAN to mirror traffic from remote switches

Remote Switched Port Analyzer (RSPAN) allows you to mirror traffic from remote switches for analysis on a local destination port.

[Contact Us](#)

Microsoft Word

Switches that support port mirroring (SPAN) are typically capable of supporting multiple mirror sessions with little or no affect on their performance.

[Contact Us](#)

Configuring local mirroring

Enter the mirror-port port number command to configure the session. Determine the traffic to be selected for mirroring by any of the following methods and the appropriate configuration level (mesh and switch).
