

How to relocate fiber optic cables to a router

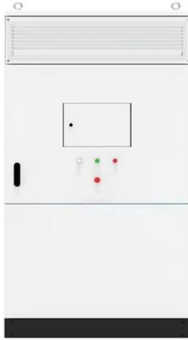

Overview

The typical solution is install the fiber modem in the best place for the fiber, and then run a single ethernet line to your router. My brother was unable to have the setup were he required it on the install due to the work involved. He needed it where his wired network already exists, so we are going to have to run a Category 6 UTP c. Can I extend this cable with a coupler or a hub or something and run more of this same cable the length I need to get to my living room, about 20m?

Fibre optic cable relocation involves moving existing fibre optic installations to a new location.
