

How to reset a router when converting fiber optic cable to router mode

Overview

How to restart the fiber router step by step?

Locate the reset button on the back or side of the router. It is recommended to wait at least 30 seconds before restarting the router to ensure that it has completely turned off. Resetting the fiber internet router or modem allows it to refresh and clear any temporary glitches or errors that may be causing connectivity problems. It essentially reboots the device and restarts all its processes, which can often resolve issues like slow internet speed, network connectivity. It will also erase any customized settings you have made, including personalized password and WiFi settings.
