

How to select the type of long-span cable tray in Belarus

Overview

Ladder tray is typically used for heavy-duty power cables and long industrial runs, offering high strength and easy cable entry. Cable tray (or cable ladder) systems are a popular alternative to electrical conduit systems, as they have an outstanding record for dependable service, design flexibility and cost savings in commercial and industrial applications. Mechanically, the rung-and-rail structure: Ladder cable trays are most appropriate when: A perforated cable tray—also called a ventilated trough tray —features a solid bottom with. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. It offers cable tray systems fabricated from corrosion-resistant steel, stainless steel and aluminium alloys along with corrosion-resistant finishes, including zinc, PVC and epoxy.
