

How to set up a router for dedicated fiber broadband

Overview

To set up your router for fiber internet quickly, connect the router to your fiber modem, access the router's settings via a web browser, and input the provided ISP credentials. Routers designed for DSL (which uses phone line inputs) or cable (which uses coaxial inputs) won't work. Make sure to update the firmware, configure Wi-Fi security, and customize your network name for optimal performance. However, setting up a fiber optic connection to your router can seem daunting if you're unfamiliar with the process. This guide explains what you'll need, how to set it up, and what to expect if you don't use an EE or BT Hub.
