

How to support cable trays with Z-shaped steel

All-Optical Backplane

- Zero fiber connections at the optical layer, three layers of dustproof design, and stable running for 20 years
- Innovative multi-level dustproof and optical port alignment technologies, ensuring high reliability

Many-Degree WSS

- 32 degrees, non-blocking flexible grooming
- Contentionless, OA-free, high reliability, 3x wavelength dropping efficiency compared with traditional boards

Digital Optical Layer

- Use of OFDM pilot tone and high-precision wavelength monitoring technologies to visualize the fiber quality, wavelength resources, and performance of the OXC system, achieving digital O&M

Overview

Hold Down Clamp also known as Z clamp is a quick & easy method of securing GRP Cable tray/Cable ladders to the supporting structure. When developing our cable support OBO can offer reliable solutions for systems, three attributes are at the routing and fastening cables securely core of what we do: efficiency, resiliency for each of these installation challenges and safety. Cable ladder systems and cable tray systems shall be manufactured in accordance with BS EN 61537, channel support. Hubbell's NEXTFRAME® Ladder Tray is the effective and widely used cable runway that supports and delivers bundles of cable between cabinets, racks, and closets, along walls, and suspended from ceilings. UNITECH's metal framing channel is cold formed on modern rolling machines from low carbon. These guidelines are not intended to cover all details or variations in cable ladder and cable tray.
