

# How to test fiber optic cable connectors

## Overview

---

The three standard methods for testing fiber optic cabling are a visible light source, power meter and light source, and optical time domain reflectometer (OTDR). While there are many different fiber optic cable tests, the most common version is an insertion loss test, also known as an attenuation, jumper, or connectivity test. This test requires a special testing kit and protective eyewear, but it will help you diagnose problems with the cable's. **Why Does Fiber Optic Testing Matter?**

Fiber internet offers better speed and performance than copper options, but the cables are very sensitive to bending, contamination, and physical. The protruding ferrule makes it simple to connect them to test equipment as well as each other.
