

How to turn off an LED distribution box

Overview

Manual switches are the most common and traditional approach to turning on/off LED strip lights. However, you can control LED strip lights in several other ways- using a remote, via a mobile app, clapping on/off, using a motion sensor, and more. In this article, we'll cover the most effective methods for turning off LED strips, from manual switches to advanced smart home integrations. The power source is typically a wall outlet or a battery pack, while the controller is the device that allows you to control the lights, change colors, and adjust brightness.
