

Huijue switch optical port automatically crashes

Overview

If possible, remove and reinstall the optical modules to check whether the fault is rectified. This document describes how to check the switch interface or port status and how to locate an interface physically down fault and restore the interface to the up state. I have an isolated system with 2 linux computers connected by two, layer 2 CRS305-1G-4S+IN switches with our patented line-of-sight PTP optical 10Gbps link connecting the switches together (see diagram). Why Is the Bandwidth of a VLANIF Interface on a Switch Displayed as 1 Gbit/s on U2000?

Why Are There a Large Number of Error Packets in the Inbound Direction of an S2700 When the S2700 Is Connected to an S5700 and Packets Are Correctly Sent and Received on the S5700?

Why Is the Interface Indicator. If the fault is caused by incorrect configuration or networking environment, change the configuration or networking environment.

Huijue switch optical port automatically crashes

Why would my switch be shutting down ports automatically?

My thoughts: Someone may have gotten in the way of the optical link while it was running an automated bandwidth test and caused something like a UDLD/STP event which caused that port
