

IK10 Edge Data Center in Mexico

Overview

The client held a competition for the development of an EDGE Data Center in Mexico City, based on a restricted invitation. Save the trouble of contacting the providers yourself, check out our Quote Service. Edge computing refers to the deployment of computing resources, servers, storage, and networking closer to the point where data is generated or consumed, rather than relying solely on large, centralized data centers (hyperscale or colocation). This data centre is used exclusively for colocation and offers a Tier III Concurrently Maintainable availability level, certified by the Uptime Institute. Company repurposing sites acquired from Telefónica Movistar A new firm has launched in Mexico with aims to deploy a network of 30 Edge data centers across the country. Mexican firm Edgenet last week announced the launch of Mayia, the first artificial intelligence (AI) center with the "Made in.
