

Idu optical module

Overview

The integrated Optical Distribution Unit (iODU) receives downlink RF signals from the integrated BTS Interface Unit (iBIU), converts the RF signals to optical, then sends the signal to the remote optic units (ROUs) or to the Optic Expansion Unit (OEU or iOEU) via fiber optic cabling. Integrated circuits and reference designs help you create a smaller and faster optical module design used in high-bandwidth data communication applications. Whether you are creating a 100-Gbps or 400-Gbps, small form-factor pluggable (SFP) module, SFP+ transceiver, XFP module, CFP, X2/XENPAK module. The OptiX OSN500 supports configuration of TM (Terminal Multiplexer) and ADM (Add/Drop Multiplexer) network element types and their hybrid configurations. RTN 910A (code:02312KWH SLJMSITE07) Basic Configuration Unit : The Huawei 6-42 GHz traditional frequency IP microwave has a maximum of 2 Gbit/s per carrier and 16 Gbit/s per antenna ultra-large transmission capacity, it is the industry's first IP microwave that supports TDM/Hybrid/Packet/ Routing.

Idu optical module

About

About iDu Optics was created by Weill Cornell Medicine MD-PhD student, Du Cheng, to solve a need he saw while working the in lab. After iDu Optics took first place in
