

# **Industrial Ethernet Fiber Optic Cable Fault Locator Anti- tracking**

## Overview

---

The FLS-140 is the easiest way to identify optical fibers from end to end and locate polished connector endfaces. Optical Time Domain Reflectometers (OTDR) provides graphical data and analysis along the entire length of a cable, way beyond the reach of a VFL, but they can be expensive and require more time and skill to operate. PROLITE-11 Visual Fault Locator is equipped with a 650-nm high power visible laser diode, can be operated in CW (continuous) or MOD (1 Hz modulation) mode. 9-in-1 Cable Testing Multifunctionality: Combines 9 key functions including wire mapping, digital cable tracing, port flashing, cable length measurement, PoE checking, crimping test, OPM (optical power meter), VFL (visual fault location), and NCV (non-contact voltage) test, streamlining network. Enables comparison between fault and normal cable waveforms to locate fault points clearly. The optical cable identifier is the first intelligent high-precision testing instrument equipped with multiple functions such as cloud wireless transmission and smart optical cloud platform. It adopts an 8-inch capacitive full-touch screen supporting multi-point touch, Integrated optical cable.

## Industrial Ethernet Fiber Optic Cable Fault Locator Anti-tracking
