

Installation spacing of rainwater pipe distribution box

Overview

When using 80mm Round Downpipe with Hi-Cap and Niagara Systems, fascia brackets should be spaced at a maximum of 800mm intervals. The Wavin Osma range offers a choice of six rainwater gutter profiles to meet the varying aesthetic, performance and installation requirements for all types of building, from single dwelling to large residential, commercial or industrial premises. The hydraulic involved in distribution box is presented in Doc n° MF4-S40 "Crest flow in distribution box" All the details can be found in the drawing Drawing n° MF4-D43: Example: Find details about the DB in the sketch map of the network: Number and diameters of outlets are written inside the DB. It is a pan-European standard however, as a considerable amount of the UK design detail is actually in line with mainland Europe in 2000 and is now measured in litres per the intensity of rainfall likely to. The external fascia brackets help prevent leaf buildup and allow for easy cleaning. Iplex Polyflow™ stop ends and corners are symmetrical, reducing the number for either internal or external corners.
