

Intelligent drawer-type patch panel

Overview

This complete & intelligent-ready physical layer management system uses RFID technology for wireless detection of individual patch cords & real-time monitoring of unintended physical changes in network infrastructure. A PCU (Panel Control Unit) is equipped at the front of the patch panels and scans the area in front of each port. LEDs above each port are used to trace intelligent-ready panel without the antenna. Infinique's Intelligent Patch Panel Solution for Copper and Fiber Structured Cabling System provides an automated and versatile remote management of ICT infrastructure.
