

Interface Fibre Channel

Overview

Fibre Channel (FC) is a high-speed data transfer protocol providing in-order, lossless delivery of raw block data. Fibre Channel over Ethernet (FCoE) encapsulation allows a physical Ethernet cable to simultaneously carry Fibre Channel and Ethernet traffic. The committee standardizing FC is the International Committee for Information Technology Standards (INCITS).

Interface Fibre Channel

An Introduction to Fibre Channel

Fibre Channel is a flexible, scalable, high-speed data transfer interface that can operate over a variety of both copper wire and optical fiber at data rates up to 250 times faster than existing communications
