

Is there equipment in the distribution box

Overview

A distribution box is a low-voltage distribution box composed of switchgear, measuring instruments, protective appliances, and auxiliary equipment assembled in a closed or semi closed metal cabinet or screen according to electrical wiring requirements. In the safe and effective supervision of electrical systems, distribution boxes may be the last quite unnoticed yet they are extremely fundamental part. As a minimum, they concentrate electricity to different circuits for steady delivery, controlling possible overloads or short circuits on all. It helps organize, protect, and control electrical connections in residential, commercial, and industrial electrical systems. The distribution box is an electrical equipment with the characteristics of small size, easy installation, special technical performance, fixed position, unique configuration function, no site restrictions, widespread application, stable and reliable operation, high space utilization rate, small.
