

Ivory Coast has many optical cables

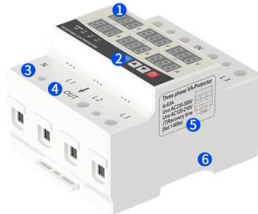

Overview

The West African nation has already installed nearly 400 miles of fiber optic cables and planned to add another nearly 900 miles this year, according to Andre Augustine Apete, Minister of information and communications technology. While submarine communications cables are used to connect countries and continents to the Internet, terrestrial fibre optic cables are used to extend this connectivity to landlocked countries or to urban centers within a country. Côte d'Ivoire has launched a project to roll out very high-speed fibre optic broadband. In this context, Côte d'Ivoire has made a remarkable breakthrough, ranking 3rd in Africa in the Fiber Development Index (FDI) 2024, published by the World Broadband Association (WBBA) in partnership with the British firm Omdia.
