

Method for connecting thick fiber optic cold connectors

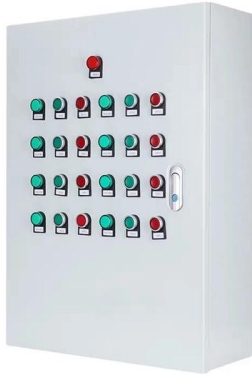

Overview

Emergency connection, also known as cold splicing, uses mechanical and chemical methods to fix and bond two fibers together. Active connection utilizes various fiber optic connectors (plugs and sockets) to connect site-to-site or site-to-cable. This method is flexible, simple, convenient, and reliable, commonly used in building computer network cabling. Proper termination is essential for ensuring optimal performance, reducing signal loss, and maintaining the durability of the connection. Ferrules are generally made of ceramics which have similar characteristics to the glass fiber and are easily secured with adhesives.

Method for connecting thick fiber optic cold connectors

The FOA Reference For Fiber Optics

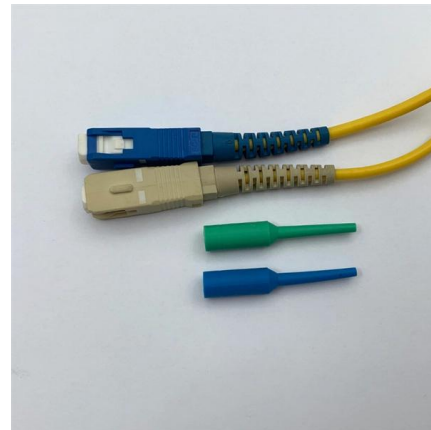

Fiber optic joints or terminations are made two ways: 1) splices which create a permanent joint between the two fibers or 2) connectors that mate two fibers to
