

Network security device traffic collector

Overview

Network collectors play a crucial role in network management and security by gathering and aggregating data from various sources within a network. The Nozomi Guardian security sensor passively observes and analyzes local network traffic to provide comprehensive OT and IoT asset visibility. The type of information collected from IP traffic by NetFlow to determine a flow include: By collecting this information and analyzing it, a lot of insight can be gained about. NetFlow is a network protocol developed by Cisco that notes and reports on all IP conversations passing through an interface.

Network security device traffic collector

What is Network Traffic Analysis (NTA)? Benefits

Network Traffic Analysis (NTA) is a method of monitoring network availability and activity to identify anomalies, including security and operational issues.
