

No signal input after KVM switch is switched

Overview

Problem 3: The KVM switch is on but nothing shows on the display or it shows "no signal". Solution: First, check if the input source is powered on, and ensure that you have switched to the corresponding channel where the input source is connected. You'll also learn when it might be time to upgrade to a more reliable, feature-packed KVM switch like Avico's. The setup I'm replacing is actually one of two machines that are connected to a KVM switch and share a pair of 19" monitors. I want to be able to easily switch between my home Windows desktop and Windows work laptop, using the same mouse (optionally some other USB devices), keyboard, and two monitors (in extended settings), while also powering my laptop.

No signal input after KVM switch is switched

KVM monitor no signal issue : r/pcmasterrace

My new monitor (ASUS TUF Gaming VG289Q1A) works fine connected directly to my computers, but on two of the four computers, when connected via KVMP switch, the computer detects the monitor, but
