

Non-woven fabric optical cable

Overview

Using a superabsorbent SAF™ Spun Yarn or low basis weight superabsorbent SAF™ Thermobond Nonwoven Fabric, can help protect power or telecommunication (optical) cables by rapidly absorbing any incoming water should the sheath be breached. Nonwoven works with leading cable manufacturers to develop intelligent fabrics that protect the integrity of your industrial copper cables. Description: Cable nonwoven fabric, commonly known as cable waterblocking tape or cable nonwoven fabric, is a key non-metallic material used in the power cable and optical cable industries. It's not the common "nonwoven fabric" used in shopping bags, but a specially designed and process. Non-Woven Polyester Tape (NANOVN), is a non-conductive or semi-conductive and non-woven tape which produced micro diameter polyester short fibers with Carding technology in natural white color or carbon coated black color.
