

Operation of a Spectrometer

Overview

A spectrometer is a scientific instrument used to separate and measure components of a physical phenomenon.

Operation of a Spectrometer

What Is A Spectrometer?

A spectrometer is a common tool used by various scientists to determine information about an object or substances through the analysis of its

Spectrometer

A spectrometer is a scientific instrument used to separate and measure spectral components of a physical phenomenon. Spectrometer is a broad term often used to describe instruments that measure a continuous variable of a phenomenon where the spectral components are somehow mixed. In visible light a spectrometer can separate white light and measure individual narrow bands of color, called a spectrum. A mass spectrometer
